

NORTHROP GRUMMAN

DEFINING THE FUTURE™

© 2007 Northrop Grumman Corporation

**State-of-the-art in reconnaissance,
superior in-strike capability,
indispensable in combat.**

When Northrop Grumman's Hunter unmanned aircraft system (UAS) deploys to a fight, it does so with more than 52,000 hours of flight time behind it. In operation since 1996, Hunter is a proven combat multiplier, providing warfighters with actionable reconnaissance, surveillance and target acquisition capabilities, along with communications relay and weapons delivery. With over 21 hours of endurance and a mission range of more than 200 kilometers, Hunter gathers real-time information and relays it to commanders and soldiers on the ground by video link. Even in places where terrain is an obstacle, Hunter always flies while providing "eyes" over the battlespace.
